## **DETAILED ACTION**

## Response to Amendment

This office action is responsive to communication(s) filed on 08/24/04.

Claims 1-6 are presented for examination.

Applicant's arguments with respect to claims 1-6 have been considered but found not persuasive.

Applicants argue that "Ek teaches away from forming GaN directly on SiON, and Ek would not have used AlN as a buffer layer for GaN since such additional processing adds numerous and expense process steps" was not found persuasive. As discuss in previous office action, one having ordinary skill in the art would have modified Nikishin et al. in view of Ek et al. to replace AlN layer of Nikishin et al. by SiON layer of Ek et al. because SiON layer formed on the silicon substrate would reduce the difference in lattice parameters, strength of Si-N bond between silicon of SiON layer and nitrogen of GaN layer, thus improve thermal stability, low stress, and crack resistance to enhance a high quality GaN. If Nikishin et al. had used SiON instead of AlN layer, Nikishin et al would have formed GaN directly on and in contact with SiON layer in order to reduce strength of Si-N bond between SiON and GaN layer.

Examiner found that limitations cited in claim 1 given no patentable weight in distinguishing the claimed invention over the prior art. Therefore, it is believed that the previous rejection should be sustained.

Claims 1-3, 5-6 stand reject as in previous rejection.

Applicants argue that the thickness of SiON layer less than 100 A producing high quality single crystal GaN layers is found persuasive. Examiner withdraws the rejection over claim 4 wherein the thickness of the SiON layer is from 15-40 A.

Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent formed including all of the limitations of the base claim and any intervening claims, since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the SiON layer having a thickness from 15 to 40 A.

## Conclusion

THIS ACTION IS MADE FINAL. See MPEP '706.07(a). Applicants are reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for response to this final action is set to expire THREE MONTHS from the date of this action. In the event a first response is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event will the statutory period for response expire later than SIX MONTHS from the date of this final action.

Art Unit: 2818

When responding to the office action, Applicants are advised to provide the examiner with the line numbers and page numbers in the application and/or references cited to assist the examiner to locate the appropriate paragraphs.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to whose telephone number is (571) 272-1785. Other inquiries of this application should be called to (571) 272-1562 or the fax number (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
